#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Status*

1. Claims 1-10 are pending.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Switkes et al., American Vacuum Society in view of Niki et al., U.S. Patent No. 5,326,675.

Switkes teaches an immersion exposure method comprising contacting water as the immersion liquid, between the projection lens and the photoresist. The photoresist is then exposed to radiation and developed. Switkes does not teach that the photoresist has a shield layer over the photoresist.

However, Niki teaches a radiation-sensitive composition with an acidic coating layer applied thereon (shield layer). The acidic coating layer is applied is not sensitive to radiation and does not dissolve the radiation-sensitive layer. However, the acidic coating layer is dissolved by a tetramethylammonium hydroxide developer (col. 13, lines 35-38). The acidic coating layer shields harmful components that inhibit the reaction (col. 4, lines 5-15). Therefore, it would have been obvious to one of ordinary skill in the

Art Unit: 1795

art to apply an acidic coating layer to the photoresist of Switkes to protect the photoresist from deleterious effects of exposure to atmospheric components as taught by Niki.
